

Research Assistant Cancer Research Program

The Lung and Colorectal Cancer Group within the Cancer Research Program has recently discovered a new tumour suppressor protein in colorectal cancer. We aim to understand the normal physiological role of this protein and how its deficiency leads to cancer. Our group is following several leads with potential applications in diagnosis, prevention and improved cancer treatment.

We are seeking to appoint a Research Assistant to join a small team undertaking functional molecular work.

All applicants should have:

- BSc (Hons) degree (1st class) in an area of the Biological Sciences;
- Experience in cell biology and molecular genetic techniques such as cell culture, analysis of protein and mRNA expression and regulation, recombinant DNA technology or confocal microscopy.
- Excellent communication and teamwork skills;
- Enthusiastic and a strong commitment to a research career.

Successful applicants will enjoy a social, motivating workplace, positive career opportunities and competitive remuneration. Successful applicants for the Research Assistant position must be an Australian citizen or permanent resident, and may subsequently transition to an academic PhD program.

Enquiries should be directed to Dr Maija Kohonen-Corish email m.corish@garvan.org.au

Applications should be directed to hr@garvan.org.au and must include cover letter, curriculum vitae, academic statement and contact details of three professional referees.
