

Research Nurse Pituitary Research Unit

The Garvan Institute is one of Australia's leading medical research institutions with approximately 400 scientists, students and support staff working in research programs in Cancer, Diabetes & Obesity, Immunology & Inflammation, Osteoporosis, Neuroscience and Pituitary disease.

The Pituitary Research Unit investigates the role of hormones in health and disease. The research focuses on the neuroendocrine regulation of energy metabolism, body composition and physical function supported by peer reviewed funding including the NHMRC and the World Anti-Doping Agency. The PRU works closely with the Department of Endocrinology, St. Vincent's Hospital.

We are seeking an experienced Registered Nurse to undertake research on the regulation of body metabolism and composition by pituitary and sex hormones. The applicant should possess relevant work experience in clinical research. The successful applicant will be working in a dynamic environment and a well-supported research team within a dedicated research facility. This is a fixed-term position (5 days per week) for 12 months initially.

Main responsibilities include clinical assistance with subject visits, recruitment, collection, processing and tracking of biological samples, maintenance of research data and assistance with diagnostic tests of endocrine function. Excellent interpersonal and communication skills are required, and attention to detail. Computer skills (MS Office and email) are also essential. Venipuncture experience would also be an advantage.

For further information about the position, please contact Ms Jennifer Hansen (Ph. 02 9295 8231).

The level of appointment will be commensurate with qualifications and experience.

Please send a cover letter addressing the selection criteria, curriculum vitae and the names and contact details of three (3) referees to:
