

***Genomics in medicine:
Where are we at? Where are we going?***

Genomic medicine – or the use of genomic information to inform clinical practice – is being increasingly widely discussed in the journals and media. A decade after the first human genome sequence was published, it is now possible to generate a whole genome sequence in a few days at a base cost of less than 1,000 USD. What could an influx of genomic information mean for clinical practice now and in the future?

When: 12 noon – 1 pm, Wednesday 9 April, 2014.

Where: NAB Auditorium, Level 2 (enter from Burton Street), Garvan Institute of Medical Research, 384 Victoria Street, Darlinghurst NSW 2010.

Registration: m.vincent@garvan.org.au, 02 9355 5842 or at <http://www.garvan.org.au/research/clinical-genomics/kccg-events>

Presentations will be followed by a Q&A session.

Speakers:

A/Prof Marcel Dinger, Head of Clinical Genomics and Genome Informatics, Garvan Institute of Medical Research, Sydney, Australia

Ms Erica Ramos, Clinical Genomics Specialist and Certified Genetic Counselor at Illumina, Inc., San Diego, USA.
